<b>AIMS AND CONTENT</b>	
<b>20. What issues does the resource aim to address?</b>	<p><b>“Documenting the Now develops open source tools and community-centered practices that support the ethical collection, use, and preservation of publicly available content shared on web and social media.</b></p> <p><b>Documenting the Now responds to the public's use of social media for chronicling historically significant events as well as demand from scholars, students, and archivists, among others, seeking a user-friendly means of collecting and preserving this type of digital content. Documenting the Now has a strong commitment to prioritizing ethical practices when working with social media content, especially in terms of collection and long-term preservation. This commitment extends to Twitter's notion of honoring user intent and the rights of content creators. Documenting the Now is a core program of Shift Collective. We are extremely grateful for funding from the Andrew W. Mellon Foundation and technical support from the Princeton University Library.”</b></p>
21. Intended audience of resource	“scholars, students, and archivists, among others”
22. Process of development	
23. Organisation/structure/contents	<p>Documenting the Now consists of 5 tools:  <b>“DocNow</b> is a tool for appraising, collecting, and gathering consent for Twitter content.</p> <p><b>twarc</b> is a command line tool and Python library for collecting tweet data from Twitter's official API. It is designed for reliably collecting historical as well as realtime</p>

	<p>data, and can be used as a software library in your own tools and applications.</p> <p><b>Hydrator</b> is a desktop application for turning Tweet ID datasets back into tweet data to use in your research. It has been designed to be a reliable option for researchers who want to use their workstation for long running hydration jobs.</p> <p><b>Social Humans</b> is a label system for social media content. SH-C labels are for content creators to share their terms of consent for collection and re-use of their content, beyond Twitter's Terms of Service. SH-A labels are for academics and archivists who are collecting content to share contextual information about the collections. These labels are implemented in the DocNow application (and soon the Catalog), but can be used in any social media archiving program or project, including donor forms.</p> <p><b>The Catalog</b> is a community-sourced clearinghouse for tweet identifier datasets. Sharing tweet ids is a practice that is encouraged by Twitter as a way to share research data without negatively affecting users ability to have their data deleted or hidden from the web. We welcome your contributions!"</p>
